## **WaterShield**

problems impacted lives Basement have the of homeowners for over a century. The WaterShield waterproofing system is the new, modern answer. It is installed under your basement floor and functions like a gutter system does on the exterior of your home. lt collects the incoming water and drains directly to your sump pump. The WaterShield system provides a nonintrusive way to keep your basement dry, giving you peace of mind for your biggest investment.

TIP: Be sure to check the gutters, underground downspout discharge lines, grading and the sump pump for proper operation before investing in a basement waterproofing system. These items have a large impact on the foundation of your home and could be the cause of the water in your basement or crawlspace.
